

Supplier Audit

A 3rd Party Supplier Audit secures your supply chain, builds customer confidence and protects your brand.

Third Party Supplier Audit

Increasingly complex supply chains mean an increasing amount of data sharing between organisations. Motivated cyber-criminals are aware of this and attack softer targets in the chain to gain access to the primary target.

Do you have a process to manage the risk of suppliers involved with your information assets?

Are your suppliers protecting your data appropriately?

Would you know or be made aware of security breaches in your supply chain?

Perspective Risk offer independent audits for checking that your suppliers are securely handling your data, giving you the essential assurance you need.

In contrast to generic template based services, our approach is tailored to your organisation. Perspective Risk apply cost effective and relevant methods, utilising industry standards and frameworks such as ISO 27001 together with lighter options such as the Cyber Essentials standard.

We can provide a full supplier assessment process aligned to British or international standards. Our methodologies ensure risks from suppliers can be managed and mitigated to acceptable levels.

Benefits

- Verify suppliers' security controls
- Save time through outsourcing labour intensive audit and analysis of multiple suppliers
- Enforce remediation on discovered gaps
- Opportunity to improve terms for better security controls - including breach notification

Features

- Qualified ISO 27001 Lead Auditors
- Technical auditing beyond documentation
- Gap and trend analysis against any security standard
- Comprehensive reporting including remediation advice

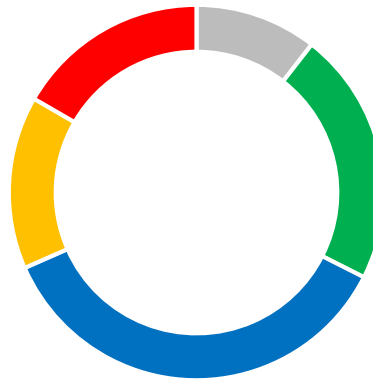

Supplier Audit

Detailed Features

- A cost-effective approach to meeting your requirements compared to reassigning internal staff
- Expert consultants with many years experience in Information Security
- Minimal disruption as we take care to deeply understand your business
- Timely, actionable results in meaningful formats
- Carry out due diligence and gain confidence in your suppliers' abilities to safeguard your assets
